O que é Linux ?

- Sistema operacional Open source
- Criado em 1991 por Linus Torvalds
- Distribuído gratuitamente
- Liberado como Free Software
- Licença GPL

From: torvalds@klaava.Helsinki.FI (Linus Benedict Torvalds)

Newsgroups: comp.os.minix

Subject: What would you like to see most in minix?

Summary: small poll for my new operating system

Message-ID: <1991Aug25.205708.9541@klaava.Helsinki.FI>

Date: 25 Aug 91 20:57:08 GMT

Organization: University of Helsinki

Hello everybody out there using minix -

I'm doing a (free) operating system (just a hobby, won't be big and professional like gnu) for 386(486) AT clones. This has been brewing since april, and is starting to get ready. I'd like any feedback on things people like/dislike in minix, as my OS resembles it somewhat (same physical layout of the file-system (due to practical reasons) among other things).

I've currently ported bash(1.08) and gcc(1.40), and things seem to work.

This implies that I'll get something practical within a few months, and I'd like to know what features most people would want. Any suggestions are welcome, but I won't promise I'll implement them :-)

Linus (torvalds@kruuna.helsinki.fi)

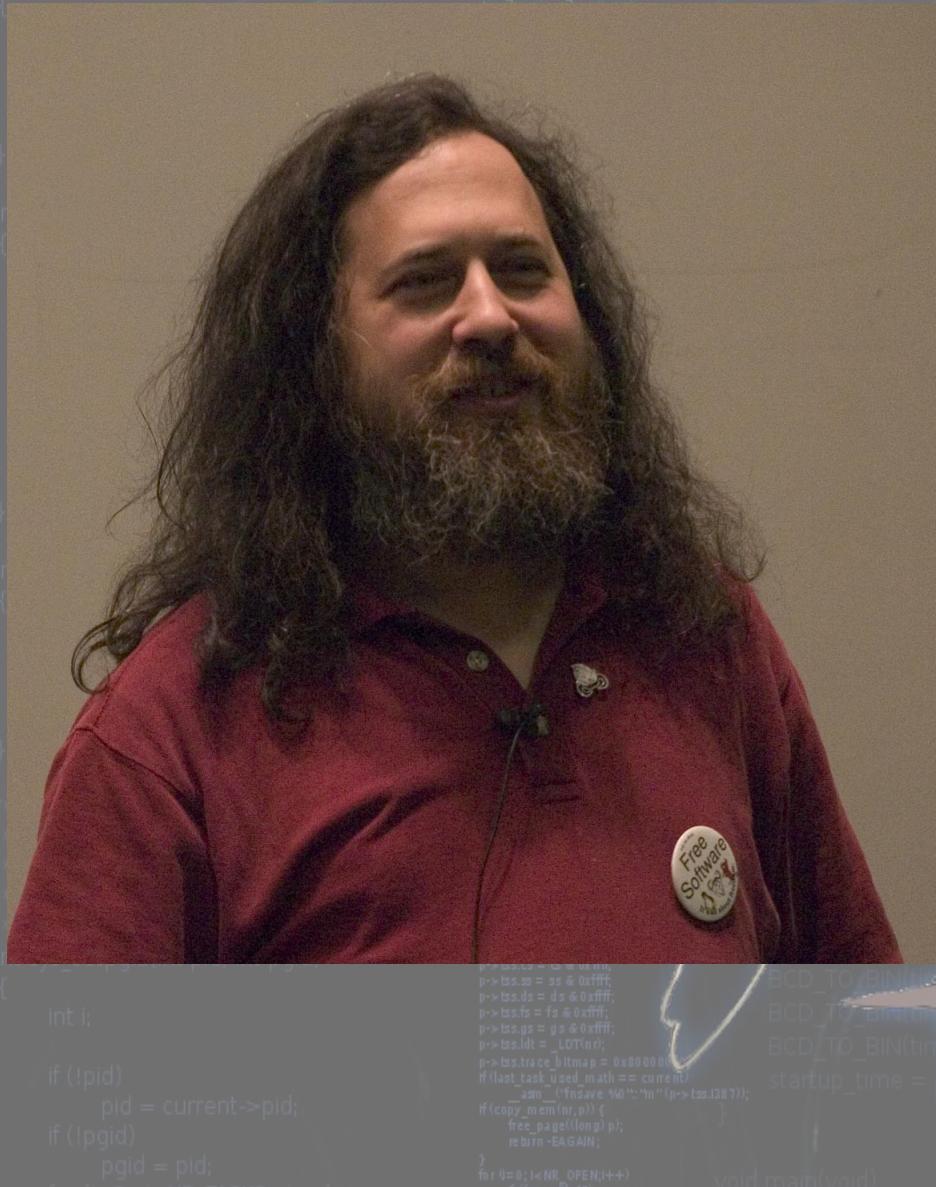

PS. Yes - it's free of any minix code, and it has a multi-threaded fs. It is NOT portable (uses 386 task switching etc), and it probably never will support anything other than AT-harddisks, as that's all I have :-(.

The World is "Open Source"

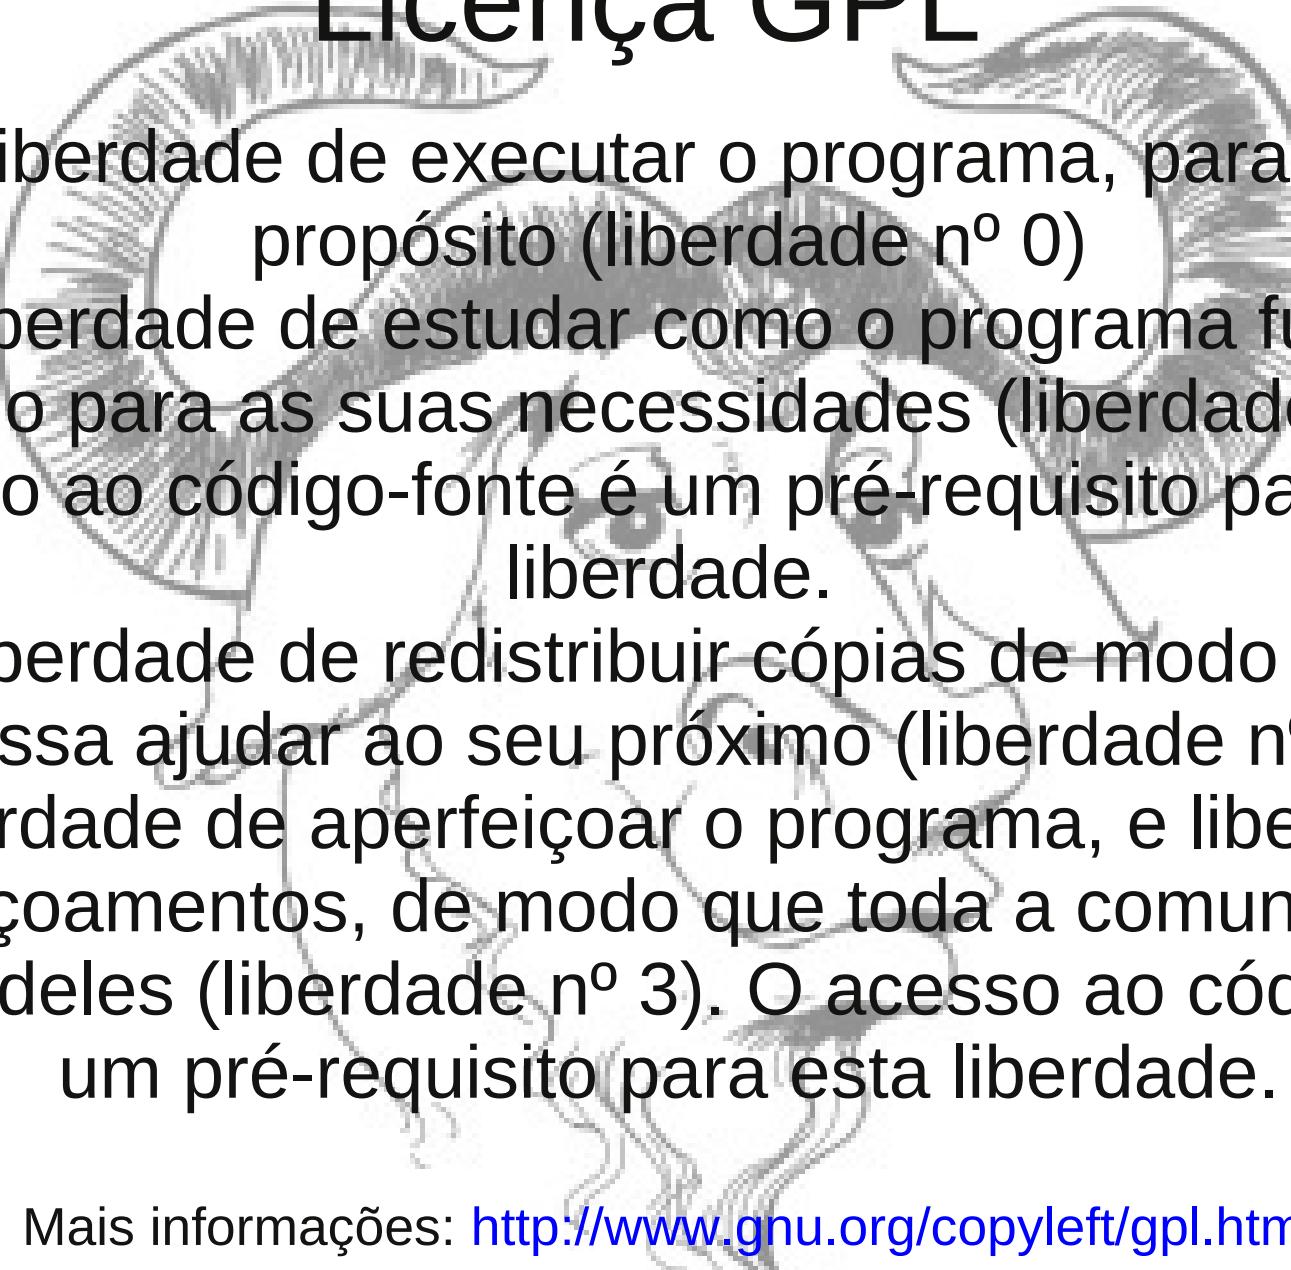

Richard Stallman e o Projeto GNU

```
int sys_setuid(int uid)
{
    if (current->euid && current->uid)
        if (uid==current->uid || current->uid==current->euid)
            current->euid=uid;
    else
        current->euid=current->uid;
    return 0;
}

int sys_stime(long *ptr)
{
    int copy_mem(int nr,struct task_struct *p)
    {
        unsigned long old_data_base,new_data_base,data_limit;
        unsigned long old_code_base,new_code_base,code_limit;
        code_limit=get_limit(0x0f);
        /* ... */
    }
}
```

Licença GPL

Curso baseado no Ubuntu

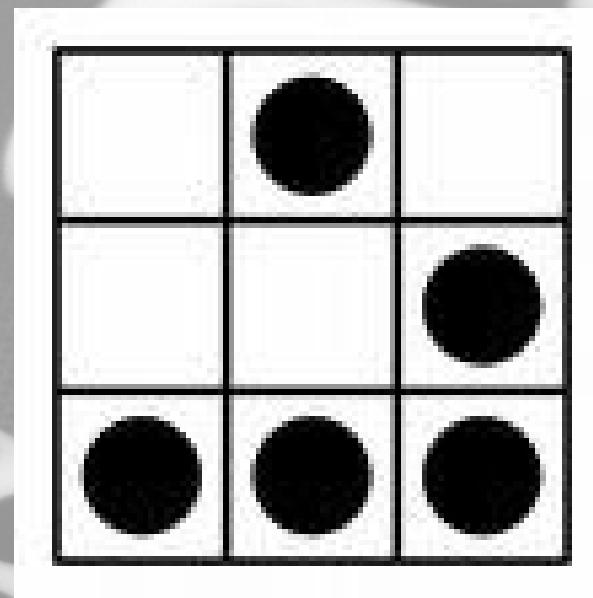

Ubuntu, safe, easy and beautiful.

Motivação - Linux, Ser ou Não Ser?

Linux vs. Windows

Hacking

- Liberdade para mexer no código

Transparência

open source

- Você sabe o que ocorre no seu S.O.

Segurança

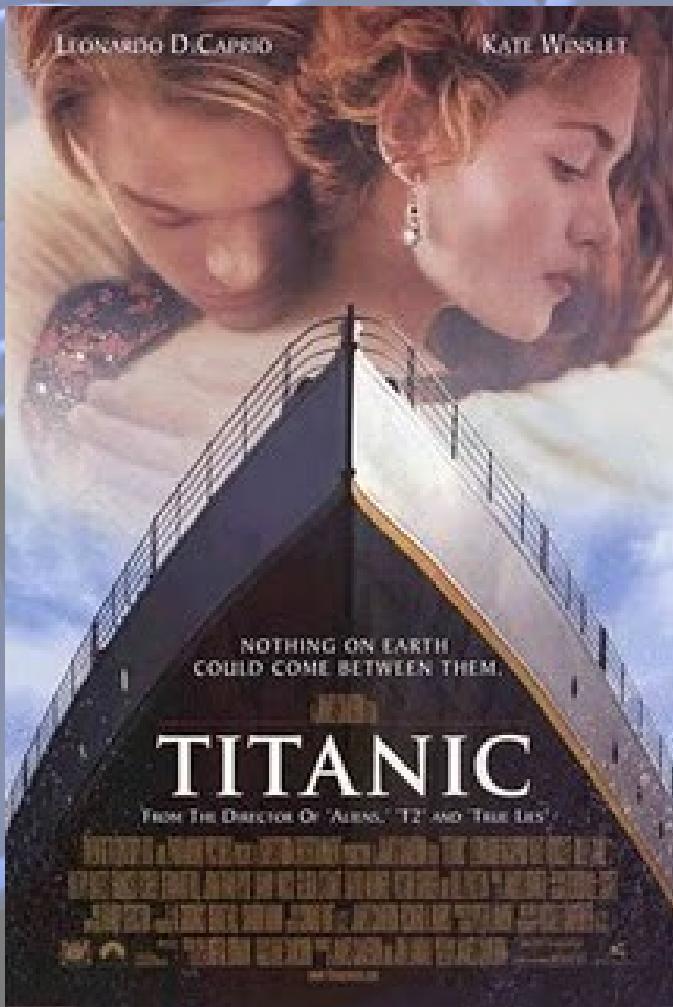

- Políticas de Segurança

Virus

- Chances de contrair virus = quase 0%

Instalação

Use Ubuntu

To use Ubuntu as a Live CD, put this CD in the CD drive and turn on or restart your computer. To install Ubuntu, run the Live CD and double click on the "Install" icon. The default installation will erase all existing software and data from your computer. If this is not what you want, follow the instructions carefully during installation.

To try Windows versions of some of the programs included in Ubuntu, put the CD in the drive while Windows is running.

The Ubuntu Promise

- Ubuntu will always be free of charge, including enterprise releases and security updates.
- Ubuntu comes with full commercial support from Canonical and hundreds of companies around the world.
- Ubuntu includes the very best open source and accessibility infrastructure available, including the software used to maintain the system, encourage participation, and support the software.

Pass it on!

This CD can be used to install Ubuntu on desktops and laptops. So install it, enjoy it, and pass it on.

Ubuntu 7.10
for your PC

Legally free to copy, modify and redistribute.
Ubuntu and the Ubuntu logo are registered trademarks of Canonical Ltd.

Alguns Conceitos - Survival Kit

- Usuário normal \$
- Root : #
- Back Space ("<--") apagar caracter à esquerda.
- Del: apagar o caracter acima do cursor.
- CTRL+A mover o cursor para o inicio da linha.
- CTRL+E mover o cursor para o fim da linha.
- CTRL+U apagar o que estiver à esquerda do cursor.
- CTRL+K apagar o que estiver à direita do cursor.
- CTRL+Y para colocar o texto que foi apagado.
- CTRL+L limpar a tela (clear).

FILE COMMANDS

- ls - directory listing
- ls -al - formatted listing with hidden files
- cd dir - change directory to dir
- cd - change to home
- pwd - show current directory
- curl - download file from url
- rm -rf dir - force remove directory dir *
- cp file1 file2 - copy file1 to file2
- cp -r dir1 dir2 - copy dir1 to dir2; create dir2 if it doesn't exist
- mv file1 file2 - rename or move file1 to file2 if file2 is an existing directory, moves file1 into directory file2
- ln -s file link - create symbolic link link to file
- touch file - create or update file
- cat > file - places standard input into file
- more file - output the contents of file
- head file - output the first 10 lines of file
- tail file - output the last 10 lines of file
- tail -f file - output the contents of file as it grows, starting with the last 10 lines

SEARCHING

- grep pattern files - search for pattern in files
- grep -r pattern directory - search for pattern recursively
- command | grep pattern - search for pattern in the output of command
- locate file - find all instances of file

SYSTEM INFO

- date - show the current date and time
- cal - show this month's calendar
- uptime - show current uptime
- w - display who is online
- whoami - who you're logged in as
- last - log of user activity, layman's about user
- vmstat - kernel information
- top - monitor processes, CPU utilization
- free - show memory and swap usage
- whereis app - show possible locations of app
- which app - show which app will be run by default

COMPRESSION

- tar cf file.tar files - create a tar named file.tar containing files
- tar xf file.tar - extract the files from file.tar
- tar czf file.tar.gz files - create a tar with Gzip compression
- tar xzf file.tar.gz - extract a tar using Gzip
- tar cjf file.tar.bz2 - create a tar with Bzip2 compression
- tar xjf file.tar.bz2 - extract a tar using Bzip2
- gzip - compresses file and renames it to file.gz
- gzip -d file.gz - decompresses file.gz back to file

NETWORK

- ping host - ping host and output results
- whois domain - get whois information for domain
- dig domain - get DNS information for domain
- dig -x host - reverse lookup host
- wget file - download file
- wget -c file - continue a stopped download

INSTALLATION

- Install from source:
./configure
make
make install
- dpkg -i package.deb - install a package (Debian)
rpm -Uvh pkg.rpm - install a package (RPM)

PERMISSIONS

- chmod octal file - change the permissions of file to octal, which can be found separately for user, group, and world by adding:
 - 4 - read (r)
 - 2 - write (w)
 - 1 - execute (x)

Examples:

- chmod 777 - read, write, execute for all
- chmod 755 - rwx for owner, rx for group and world

For more options, see man chmod.

ROOTAL

- ps - display your currently active processes
- top - display all running processes
- kill pid - kill process id pid
- killall proc - kill all processes named proc
- fg - brings the most recent job to foreground
- fg n - brings job n to the foreground

SHORTCUTS

- Ctrl+C - halts the current command
- Ctrl+S - stops the current command, resume with Ctrl+Q
- Ctrl+B - move cursor to the beginning of current session, similar to exit
- Ctrl+W - erases one word in the current line
- Ctrl+U - erases the whole line
- Ctrl+R - type to bring up a recent command
- !! - repeats the last command
- exit - log out of current session

- man - Mostra help do comando
help [opções] [comando]
- man -a mkdir

cli commands

PROCESS MANAGEMENT

- ① ps - display your currently active processes
- ① top - display all running processes
- ① kill pid - kill process id pid
- ① killall proc - kill all processes named proc (use with extreme caution)
- ① bg - lists stopped or background jobs; resume a stopped job in the background
- ① fg - brings the most recent job to foreground
- ① fg n - brings job n to the foreground

SHORTCUTS

- ① Ctrl+C - halts the current command
- ① Ctrl+Z - stops the current command, resume with fg in the foreground or bg in the background
- ① Ctrl+D - log out of current session, similar to exit
- ① Ctrl+W - erases one word in the current line
- ① Ctrl+U - erases the whole line
- ① Ctrl+R - type to bring up a recent command
- ① !! - repeats the last command
- ① exit - log out of current session

FILE COMMANDS

- ① ls - directory listing
- ① ls -al - formatted listing with hidden files
- ① cd dir - change directory to dir
- ① cd - change to home
- ① pwd - show current directory
- ① rm file - delete file
- ① rm -rf dir - force remove directory dir *
- ① cp file1 file2 - copy file1 to file2
- ① cp -r dir1 dir2 - copy dir1 to dir2; create dir2 if it doesn't exist
- ① mv file1 file2 - rename or move file1 to file2 if file2 is an existing directory, moves file1 into directory file2
- ① ln -s file link - create symbolic link link to file
- ① touch file - create or update file
- ① cat > file - places standard input into file
- ① more file - output the contents of file
- ① head file - output the first 10 lines of file
- ① tail file - output the last 10 lines of file
- ① tail -f file - output the contents of file as it grows, starting with the last 10 lines
- ① grep pattern files - search for pattern in files
- ① grep -r pattern dir - search recursively for pattern in dir
- ① grep -o pattern file - search for pattern in the output of file
- ① grep -c pattern file - count instances of file

SYSTEM INFO

- ① date - show the current date and time
- ① cal - show this month's calendar
- ① uptime - show current uptime
- ① w - display who is online
- ① whoami - who you are logged in as
- ① finger user - display information about user
- ① uname -a - show kernel information
- ① cat /proc/cpuinfo - cpu information
- ① cat /proc/meminfo - memory information
- ① man command - show the manual for command
- ① df - show disk usage
- ① du - show directory space usage
- ① free - show memory and swap usage
- ① whereis app - show possible locations of app
- ① which app - show which app will be run by default

COMPRESSION

- ① tar cf file.tar files - create a tar named file.tar containing files
- ① tar xf file.tar - extract the files from file.tar
- ① tar czf file.tar.gz files - create a tar with Gzip compression
- ① tar xzf file.tar.gz - extract a tar using Gzip
- ① tar cjf file.tar.bz2 - create a tar with Bzip2 compression
- ① tar xjf file.tar.bz2 - extract a tar using Bzip2
- ① gzip file - compresses file and renames it to file.gz
- ① gzip -d file.gz - decompresses file.gz back to file

NETWORK

- ① ping host - ping host and output results
- ① whois domain - get whois information for domain
- ① dig domain - get DNS information for domain
- ① dig -x host - reverse lookup host
- ① wget file - download file
- ① wget -c file - continue a stopped download

INSTALLATION

- ① Install from source:
./configure
make
make install
- ① dpkg -i pkg.deb - install a package (Debian)
- ① rpm -Uvh pkg.rpm - install a package (RPM)

FILE PERMISSIONS

- ① chmod octal file - change the permissions of file to octal, which can be found separately for user, group, and world by adding:
 - 4 - read (r)
 - 2 - write (w)
 - 1 - execute (x)

Examples:

chmod 777 - read, write, execute for all
 chmod 755 - rwx for owner, rx for group and world
 For more options, see man chmod.

FILE COMMANDS

- ① ls - directory listing
- ① ls -al - formatted listing with hidden files
- ① cd dir - change directory to dir
- ① cd - change to home
- ① pwd - show current directory
- ① rm file - delete file
- ① rm -rf dir - delete directory dir
- ① cp file1 file2 - copy file1 to file2
- ① cp -r dir1 dir2 - copy dir1 to dir2; create dir2 if it doesn't exist
- ① mv file1 file2 - rename or move file1 to file2 if file2 is an existing directory, moves file1 into directory file2
- ① ln -s file link - create symbolic link link to file
- ① touch file - create or update file
- ① cat > file - places standard input into file
- ① more file - output the contents of file
- ① head file - output the first 10 lines of file
- ① tail file - output the last 10 lines of file
- ① tail -f file - output the contents of file as it grows, starting with the last 10 lines

- ① grep pattern files - search for pattern in files
- ① grep -r pattern dir - search recursively for pattern in dir
- ① egrep pattern - search for pattern in the command line
- ① find file - find all instances of file

SYSTEM INFO

- ① date - show the current date and time
- ① cal - show this month's calendar
- ① uptime - show current uptime
- ① w - display who is online
- ① whoami - who you are logged in as
- ① finger user - display information about user
- ① uname -a - show kernel information
- ① cat /proc/cpuinfo - cpu information
- ① cat /proc/meminfo - memory information
- ① man command - show the manual for command
- ① df - show disk usage
- ① du - show directory space usage
- ① free - show memory and swap usage
- ① whereis app - show possible locations of app
- ① which app - show which app will be run by default

COMPRESSION

- ① tar cf file.tar files - create a tar named file.tar containing files
- ① tar xf file.tar - extract the files from file.tar
- ① tar czf file.tar.gz files - create a tar with Gzip compression
- ① tar xzf file.tar.gz - extract a tar using Gzip
- ① tar cjf file.tar.bz2 - create a tar with Bzip2 compression
- ① tar xjf file.tar.bz2 - extract a tar using Bzip2
- ① gzip file - compresses file and renames it to file.gz
- ① gzip -d file.gz - decompresses file.gz back to file

NETWORK

- ① ping host - ping host and output results
- ① whois domain - get whois information for domain
- ① dig domain - get DNS information for domain
- ① dig -x host - reverse lookup host
- ① wget file - download file
- ① wget -c file - continue a stopped download

INSTALLATION

- ① Install from source:
./configure
make
make install
- ① dpkg -i pkg.deb - install a package (Debian)
- ① rpm -Uvh pkg.rpm - install a package (RPM)

FILE PERMISSIONS

- ① chmod octal file - change the permissions of file to octal, which can be found separately for user, group, and world by adding:
 - 4 - read (r)
 - 2 - write (w)
 - 1 - execute (x)

Examples:

chmod 777 - read, write, execute for all
chmod 755 - rwx for owner, rx for group and world
For more options, see man chmod.

SHORTCUTS

- ① Ctrl+C - halts the current command
- ① Ctrl+Z - stops the current command, resume with fg in the foreground or bg in the background
- ① Ctrl+D - log out of current session, similar to exit
- ① Ctrl+W - erases one word in the current line
- ① Ctrl+U - erases the whole line
- ① Ctrl+R - type to bring up a recent command
- ① !! - repeats the last command
- ① exit - log out of current session

- ls - Mostra arquivos de diretórios
 - ls [opções] [caminho]
- ls -lha

cli commands

FILE COMMANDS

- ① ls - directory listing
- ① ls -al - formatted listing with hidden files
- ① cd dir - change directory to dir
- ① cd ~ - change to home
- ① pwd - show current directory
- ① rm file - delete file
- ① rm -rf dir - delete directory dir
- ① cp file1 file2 - copy file1 to file2
- ① cp -r dir1 dir2 - copy dir1 to dir2; create dir2 if it doesn't exist
- ① mv file1 file2 - rename or move file1 to file2 if file2 is an existing directory, moves file1 into directory file2
- ① ln -s file link - create symbolic link link to file
- ① touch file - create or update file
- ① cat > file - places standard input into file
- ① more file - output the contents of file
- ① head file - output the first 10 lines of file
- ① tail file - output the last 10 lines of file
- ① tail -f file - output the contents of file as it grows, starting with the last 10 lines
- ① stty sane - restore terminal settings
- ① grep pattern files - search for pattern in files
- ① grep -r pattern dir - search recursively for pattern in dir
- ① command | grep pattern - search for pattern in the output of command
- ① locate file - find all instances of file

SYSTEM INFO

- ① date - show the current date and time
- ① cal - show this month's calendar
- ① uptime - show current uptime

INSTALLATION

- ① Install from source:
`./configure`
`make`
`make install`
- ① `dpkg -i pkg.deb` - install a package (Debian)
- ① `rpm -Uvh pkg.rpm` - install a package (RPM)

FILE PERMISSIONS

- ① `chmod octal file` - change the permissions of file to octal, which can be found separately for user, group, and world by adding:
 - 4 - read (r)
 - 2 - write (w)
 - 1 - execute (x)

Examples:

```
chmod 777 - read, write, execute for all
chmod 755 - rwx for owner, rx for group and world
For more options, see man chmod.
```

- **mkdir** - Cria um diretório no sistema.
mkdir [opções] [caminho]
- **mkdir –verbose /home/cbcc/minhaPasta**

Comandos

FILE COMMANDS

- ls - directory listing
- ls -al - formatted listing with hidden files
- cd dir - change directory to dir
- cd - change to home
- pwd - show current directory
- rm file - delete file
- rm -rf dir - force remove directory dir *
- cp file1 file2 - copy file1 to file2
- cp -r dir1 dir2 - copy dir1 to dir2; create dir2 if it doesn't exist
- mv file1 file2 - rename or move file1 to file2 if file2 is an existing directory, moves file1 into directory file2
- ln -s file link - create symbolic link link to file
- touch file - create or update file
- cat > file - places standard input into file
- more file - output the contents of file
- head file - output the first 10 lines of file
- tail file - output the last 10 lines of file
- tail -f file - output the contents of file as it grows, starting with the last 10 lines

- grep pattern files - search for pattern in files
- grep -r pattern dir - search recursively for pattern in dir
- grep -v pattern file - search for pattern in the output of command
- grep -n pattern file - instances of file

SYSTEM INFO

- date - show the current date and time
- cal - show this month's calendar
- uptime - show current uptime
- w - display who is online
- whoami - who you are logged in as
- finger user - display information about user
- uname -a - show kernel information

- whereis app - show possible locations of app
- which app - show which app will be run by default

COMPRESSION

- tar cf file.tar files - create a tar named file.tar containing files
- tar xf file.tar - extract the files from file.tar
- tar czf file.tar.gz files - create a tar with Gzip compression
- tar xzf file.tar.gz - extract a tar using Gzip
- tar cf file.tar.bz2 - create a tar with Bzip2 compression
- tar xjf file.tar.bz2 - extract a tar using Bzip2
- gzip file - compresses file and renames it to file.gz
- gzip -d file.gz - decompresses file.gz back to file

NETWORK

- ping host - ping host and output results
- whois domain - get whois information for domain
- nslookup host - get DNS information for domain
- dig -x host - reverse lookup host
- wget file - download file
- wget -c file - continue a stopped download

INSTALLATION

- Install from source:
 ./configure
 make
 make install
- dpkg -i pkg.deb - install a package (Debian)
- rpm -Uvh pkg.rpm - install a package (RPM)

FILE PERMISSIONS

- chmod octal file - change the permissions of file to octal, which can be found separately for user, group, and world by adding:
 - 4 - read (r)
 - 2 - write (w)
 - 1 - execute (x)

Examples:

```
chmod 777 - read, write, execute for all
chmod 755 - rwx for owner, rx for group and world
For more options, see man chmod.
```

SHORTCUTS

- Ctrl+C - halts the current command
- Ctrl+Z - stops the current command, resume with fg in the foreground or bg in the background
- Ctrl+D - log out of current session, similar to exit
- Ctrl+W - erases one word in the current line
- Ctrl+U - erases the whole line
- Ctrl+R - type to bring up a recent command
- !! - repeats the last command
- exit - log out of current session

FILE COMMANDS

- ① ls - directory listing
- ① ls -al - formatted listing with hidden files
- ① cd dir - change directory to dir
- ① cd - change to home
- ① pwd - show current directory
- ① rm file - delete file
- ① rm -rf dir - force remove directory dir *
- ① cp file1 file2 - copy file1 to file2
- ① cp -r dir1 dir2 - copy dir1 to dir2; create dir2 if it doesn't exist
- ① mv file1 file2 - rename or move file1 to file2 if file2 is an existing directory, moves file1 into directory file2
- ① ln -s file link - create symbolic link link to file
- ① touch file - create or update file
- ① cat > file - places standard input into file
- ① more file - output the contents of file
- ① head file - output the first 10 lines of file
- ① tail file - output the last 10 lines of file
- ① tail -f file - output the contents of file as it grows, starting with the last 10 lines

SEARCHING

- ① grep pattern files - search for pattern in files
- ① grep -r pattern dir - search recursively for pattern in dir
- ① ack pattern - search for pattern in the current command
- ① ack -l pattern - find instances of file

SYSTEM INFO

- ① date - show the current date and time
- ① cal - show this month's calendar
- ① uptime - show current uptime
- ① w - display who is online
- ① whoami - who you are logged in as
- ① finger user - display information about user
- ① uname -a - show kernel information
- ① cat /proc/cpuinfo - cpu information
- ① cat /proc/meminfo - memory information
- ① man command - show the manual for command
- ① df - show disk usage
- ① du - show directory space usage
- ① free - show memory and swap usage
- ① whereis app - show possible locations of app
- ① which app - show which app will be run by default

COMPRESSION

- ① tar cf file.tar files - create a tar named file.tar containing files
- ① tar xf file.tar - extract the files from file.tar
- ① tar czf file.tar.gz files - create a tar with Gzip compression
- ① tar ztf file.tar.gz - extract a tar using Gzip
- ① tar jcf file.tar.bz2 - create a tar with Bzip2
- ① tar xjf file.tar.bz2 - extract a tar using Bzip2
- ① gzip file - compresses file and renames it to file.gz
- ① gzip -d file.gz - decompresses file.gz back to file

NETWORK

- ① ping host - ping host and output results
- ① whois domain - get whois information for domain
- ① dig domain - get DNS information for domain
- ① dig -x host - reverse lookup host
- ① wget file - download file
- ① wget -c file - continue a stopped download

INSTALLATION

- ① Install from source:
./configure
make
make install
- ① dpkg -i pkg.deb - install a package (Debian)
- ① rpm -Uvh pkg.rpm - install a package (RPM)

FILE PERMISSIONS

- ① chmod octal file - change the permissions of file to octal, which can be found separately for user, group, and world by adding:
 - 4 - read (r)
 - 2 - write (w)
 - 1 - execute (x)

Examples:

```
chmod 777 - read, write, execute for all
chmod 755 - rwx for owner, rx for group and world
For more options, see man chmod.
```

SHORTCUTS

- ① Ctrl+C - halts the current command
- ① Ctrl+Z - stops the current command, resume with fg in the foreground or bg in the background
- ① Ctrl+D - log out of current session, similar to exit
- ① Ctrl+W - erases one word in the current line
- ① Ctrl+U - erases the whole line
- ① Ctrl+R - type to bring up a recent command
- ① !! - repeats the last command
- ① exit - log out of current session

- **rmdir** - Remove um diretório do sistema

rmdir [caminho/diretorio]

cli commands

- cat - Mostra o conteúdo de um arquivo binário ou texto.

cat [opções] [caminho/diretório]

- cat -n /etc/resolv.conf

FILE COMMANDS

- ls - directory listing
- ls -al - formatted listing with hidden files
- cd dir - change directory to dir
- cd - change to home
- pwd - show current directory
- rm file - delete file
- rm -rf dir - force remove directory dir *
- cp file1 file2 - copy file1 to file2
- cp -r dir1 dir2 - copy dir1 to dir2; create dir2 if it doesn't exist
- mv file1 file2 - rename or move file1 to file2 if file2 is an existing directory, moves file1 into directory file2
- ln -s file link - create symbolic link link to file
- touch file - create or update file
- cat > file - places standard input into file
- more file - output the contents of file
- head file - output the first 10 lines of file
- tail file - output the last 10 lines of file
- tail -f file - output the contents of file as it grows, starting with the last 10 lines

SYSTEM INFO

- date - show the current date and time
- cal - show this month's calendar
- uptime - show current uptime
- w - display who is online
- whoami - who you are logged in as
- finger user - display information about user
- uname -a - show kernel information
- cat /proc/cpuinfo - cpu information
- cat /proc/meminfo - memory information
- man command - show the manual for command
- df - show disk usage
- du - show directory space usage
- free - show memory and swap usage
- whereis app - show possible locations of app
- which app - show which app will be run by default

COMPRESSION

- tar cf file.tar files - create a tar named file.tar containing files
- tar xf file.tar - extract the files from file.tar
- tar czf file.tar.gz files - create a tar with Gzip compression
- tar zxf file.tar.gz - extract a tar using Gzip

FILE COMMANDS

- ① ls - directory listing
- ① ls -al - formatted listing with hidden files
- ① cd dir - change directory to dir
- ① cd - change to home
- ① pwd - show current directory
- ① rm file - delete file
- ① rm -rf dir - force remove directory dir *
- ① cp file1 file2 - copy file1 to file2
- ① cp -r dir1 dir2 - copy dir1 to dir2; create dir2 if it doesn't exist
- ① mv file1 file2 - rename or move file1 to file2 if file2 is an existing directory, moves file1 into directory file2
- ① ln -s file link - create symbolic link link to file
- ① touch file - create or update file
- ① cat > file - places standard input into file
- ① more file - output the contents of file
- ① head file - output the first 10 lines of file
- ① tail file - output the last 10 lines of file
- ① tail -f file - output the contents of file as it grows, starting with the last 10 lines

SYSTEM INFO

- ① date - show the current date and time
- ① cal - show this month's calendar
- ① uptime - show current uptime
- ① w - display who is online
- ① whoami - who you are logged in as
- ① finger user - display information about user
- ① uname -a - show kernel information
- ① cat /proc/cpuinfo - cpu information
- ① cat /proc/meminfo - memory information
- ① man command - show the manual for command
- ① df - show disk usage
- ① du - show directory space usage
- ① free - show memory and swap usage
- ① whereis app - show possible locations of app
- ① which app - show which app will be run by default

COMPRESSION

- ① tar cf file.tar files - create a tar named file.tar containing files
- ① tar xf file.tar - extract the files from file.tar
- ① tar czf file.tar.gz files - create a tar with Gzip compression
- ① tar zxf file.tar.gz - extract a tar using Gzip
- ① tar jxf file.tar.bz2 - extract a tar using Bzip2
- ① gzip file - compresses file and renames it to file.gz
- ① gzip -d file.gz - decompresses file.gz back to

NETWORK

- ① ping host - ping host and output results
- ① whois domain - get whois information for domain
- ① dig domain - get DNS information for domain
- ① dig -x host - reverse lookup host
- ① wget file - download file
- ① wget -c file - continue a stopped download

INSTALLATION

- ① Install from source:
./configure
make
make install
- ① dpkg -i pkg.deb - install a package (Debian)
- ① rpm -Uvh pkg.rpm - install a package (RPM)

FILE PERMISSIONS

- ① chmod octal file - change the permissions of file to octal, which can be found separately for user, group, and world by adding:
 - 4 - read (r)
 - 2 - write (w)
 - 1 - execute (x)

Examples:

chmod 777 - read, write, execute for all
chmod 755 - rwx for owner, rx for group and world
For more options, see man chmod.

PROCESS MANAGEMENT

- ① ps - display your currently active processes
- ① top - display all running processes
- ① kill pid - kill process id pid
- ① killall proc - kill all processes named proc (use with extreme caution)
- ① bg - lists stopped or background jobs; resume a stopped job in the background
- ① fg - brings the most recent job to foreground
- ① fg n - brings job n to the foreground

SHORTCUTS

- ① Ctrl+C - halts the current command
- ① Ctrl+Z - stops the current command, resume with fg in the foreground or bg in the background
- ① Ctrl+D - log out of current session, similar to exit
- ① Ctrl+W - erases one word in the current line
- ① Ctrl+U - erases the whole line
- ① Ctrl+R - type to bring up a recent command
- ① !! - repeats the last command
- ① exit - log out of current session

- Chown - Muda dono de um arquivo/diretório.
chown [opções] [dono.grupo] [diretório/arquivo]
- [opções] -Rv
- [grupo] usuários presentes no /etc/passwd

FILE COMMANDS

- ① ls - directory listing
- ① ls -al - formatted listing with hidden files
- ① cd dir - change directory to dir
- ① cd .. - change to home
- ① cd . - show current directory
- ① rm file - delete file
- ① rm -rf dir - force remove directory dir *
- ① cp file1 file2 - copy file1 to file2
- ① cp -r dir1 dir2 - copy dir1 to dir2; create dir2 if it doesn't exist
- ① mv file1 file2 - rename or move file1 to file2 if file2 is an existing directory, moves file1 into directory file2
- ① ln -s file link - create symbolic link link to file
- ① touch file - create or update file
- ① cat > file - places standard input into file
- ① more file - output the contents of file
- ① head file - output the first 10 lines of file
- ① tail file - output the last 10 lines of file
- ① tail -f file - output the contents of file as it grows, starting with the last 10 lines

SYSTEM INFO

- ① date - show the current date and time
- ① cal - show this month's calendar
- ① uptime - show current uptime
- ① w - display who is online
- ① whoami - who you are logged in as
- ① finger user - display information about user
- ① uname -a - show kernel information
- ① cat /proc/cpuinfo - cpu information
- ① cat /proc/meminfo - memory information
- ① man command - show the manual for command
- ① df - show disk usage
- ① du - show directory space usage
- ① free - show memory and swap usage
- ① whereis app - show possible locations of app
- ① which app - show which app will be run by default

COMPRESSION

- ① tar cf file.tar files - create a tar named file.tar containing files
- ① tar xf file.tar - extract the files from file.tar
- ① tar czf file.tar.gz files - create a tar with Gzip compression
- ① tar ztf file.tar.gz - extract a tar using Gzip
- ① tar jxf file.tar.bz2 - extract a tar using Bzip2
- ① gzip file - compresses file and renames it to file.gz
- ① bzip2 file - compresses file and renames it to file.bz2
- ① ping host - ping host and output results
- ① whois domain - get whois information for domain
- ① dig domain - get DNS information for domain
- ① curl - download file
- ① wget file - continue a stopped download

INSTALLATION

- ① Install from source:
./configure
make
make install
- ① dpkg -i pkg.deb - install a package (Debian)
- ① rpm -Uvh pkg.rpm - install a package (RPM)

FILE PERMISSIONS

- ① chmod octal file - change the permissions of file to octal, which can be found separately for user, group, and world by adding:
 - 4 - read (r)
 - 2 - write (w)
 - 1 - execute (x)

Examples:

chmod 777 - read, write, execute for all
chmod 755 - rwx for owner, rx for group and world
For more options, see man chmod.

SHORTCUTS

- ① Ctrl+C - halts the current command
- ① Ctrl+Z - stops the current command, resume with fg in the foreground or bg in the background
- ① Ctrl+D - log out of current session, similar to exit
- ① Ctrl+W - erases one word in the current line
- ① Ctrl+U - erases the whole line
- ① Ctrl+R - type to bring up a recent command
- ① !! - repeats the last command
- ① exit - log out of current session

- top - Mostra os programas em execução ativos, parados, tempo usado na CPU, detalhes sobre o uso da memória RAM, Swap, disponibilidade para execução de programas no sistema, etc.

- Date - Permite ver/modificar a Data e Hora do Sistema.

cli commands

PROCESS MANAGEMENT

- ① ps - display your currently active processes
- ① top - display all running processes
- ① kill pid - kill process id pid
- ① killall proc - kill all processes named proc (use with extreme caution)
- ① bg - lists stopped or background jobs; resume a stopped job in the background
- ① fg - brings the most recent job to foreground
- ① fg n - brings job n to the foreground

SHORTCUTS

- ① Ctrl+C - halts the current command
- ① Ctrl+Z - stops the current command, resume with fg in the foreground or bg in the background
- ① Ctrl+D - log out of current session, similar to exit
- ① Ctrl+W - erases one word in the current line
- ① Ctrl+U - erases the whole line
- ① Ctrl+R - type to bring up a recent command
- ① !! - repeats the last command

- ① grep -c pattern - search for pattern in the output of command
- ① locate file - find all instances of file

SYSTEM INFO

- ① date - show the current date and time
- ① cal - show this month's calendar
- ① uptime - show current uptime
- ① w - display who is online
- ① whoami - who you are logged in as
- ① finger user - display information about user
- ① uname -a - show kernel information
- ① cat /proc/cpuinfo - cpu information
- ① cat /proc/meminfo - memory information
- ① man command - show the manual for command
- ① df - show disk usage
- ① du - show directory space usage
- ① free - show memory and swap usage
- ① whereis app - show possible locations of app
- ① which app - show which app will be run by default

COMPRESSION

- ① tar cf file.tar files - create a tar named file.tar containing files
- ① tar xf file.tar - extract the files from file.tar
- ① tar czf file.tar.gz files - create a tar with Gzip compression
- ① tar ztf file.tar.gz - extract a tar using Gzip compression
- ① tar xjf file.bz2 - extract a tar using Bzip2 compression
- ① gzip file - compresses file and renames it to file.gz
- ① gzip -d file.gz - decompresses file.gz back to file

NETWORK

- ① ping host - ping host and output results
- ① whois domain - get whois information for domain
- ① dig domain - get DNS information for domain
- ① dig -x host - reverse lookup host
- ① wget file - download file
- ① wget -c file - continue a stopped download

INSTALLATION

- ① Install from source:
./configure
make
make install
- ① dpkg -i pkg.deb - install a package (Debian)
- ① rpm -Uvh pkg.rpm - install a package (RPM)

FILE PERMISSIONS

- ① chmod octal file - change the permissions of file to octal, which can be found separately for user, group, and world by adding:
 - 4 - read (r)
 - 2 - write (w)
 - 1 - execute (x)

Examples:

```
chmod 777 - read, write, execute for all
chmod 755 - rwx for owner, rx for group and world
For more options, see man chmod.
```

- **uptime** - Mostra o tempo de execução do sistema desde que o computador foi ligado.

uptime

cli commands

PROCESS MANAGEMENT

- ① ps - display your currently active processes
- ① top - display all running processes
- ① kill pid - kill process id pid
- ① killall proc - kill all processes named proc (use with extreme caution)
- ① bg - lists stopped or background jobs; resume a stopped job in the background
- ① fg - brings the most recent job to foreground
- ① fg n - brings job n to the foreground

SHORTCUTS

- ① Ctrl+C - halts the current command
- ① Ctrl+Z - stops the current command, resume with fg in the foreground or bg in the background
- ① Ctrl+D - log out of current session, similar to exit
- ① Ctrl+W - erases one word in the current line
- ① Ctrl+U - erases the whole line
- ① Ctrl+R - type to bring up a recent command
- ① !! - repeats the last command
- ① exit - log out of current session

FILE COMMANDS

- ① ls - directory listing
- ① ls -al - formatted listing with hidden files
- ① cd dir - change directory to dir
- ① cd - change to home
- ① pwd - show current directory
- ① rm file - delete file
- ① rm -rf dir - force remove directory dir *
- ① cp file1 file2 - copy file1 to file2
- ① cp -r dir1 dir2 - copy dir1 to dir2; create dir2 if it doesn't exist
- ① mv file1 file2 - rename or move file1 to file2 if file2 is an existing directory, moves file1 into directory file2
- ① ln -s file link - create symbolic link link to file
- ① touch file - create or update file
- ① cat > file - places standard input into file
- ① more file - output the contents of file
- ① head file - output the first 10 lines of file
- ① tail file - output the last 10 lines of file
- ① tail -f file - output the contents of file as it grows, starting with the last 10 lines

SEARCH

- ① grep pattern files - search for pattern in files
- ① grep pattern dir - search recursively for pattern in directory
- ① fgrep pattern file - search for pattern in the output of command
- ① locate file - find all instances of file

SYSTEM INFO

- ① date - show the current date and time
- ① cal - show this month's calendar
- ① uptime - show current uptime
- ① w - display who is online
- ① whoami - who you are logged in as
- ① finger user - display information about user
- ① uname -a - show kernel information
- ① cat /proc/cpuinfo - cpu information
- ① cat /proc/meminfo - memory information
- ① man command - show the manual for command
- ① df - show disk usage
- ① du - show directory space usage
- ① free - show memory and swap usage
- ① whereis app - show possible locations of app
- ① which app - show which app will be run by default

COMPRESSION

- ① tar cf file.tar files - create a tar named file.tar containing files
- ① tar xf file.tar - extract the files from file.tar
- ① tar czf file.tar.gz files - create a tar with Gzip compression
- ① tar ztv file.tar.gz - list the contents of a tar using Gzip
- ① tar -zcf file.tar.b2 - create a tar with Bzip2
- ① zip file compresses file and renames it to file.zip
- ① gunzip file.gz - uncompresses file.gz back to file

NETWORK

- ① ping host - ping host and output results
- ① whois domain - get whois information for domain
- ① dig domain - get DNS information for domain
- ① dig -x host - reverse lookup host
- ① wget file - download file
- ① wget -c file - continue a stopped download

INSTALLATION

- ① Install from source:
./configure
make
make install
- ① dpkg -i pkg.deb - install a package (Debian)
- ① rpm -Uvh pkg.rpm - install a package (RPM)

FILE PERMISSIONS

- ① chmod octal file - change the permissions of file to octal, which can be found separately for user, group, and world by adding:
 - 4 - read (r)
 - 2 - write (w)
 - 1 - execute (x)

Examples:

```
chmod 777 - read, write, execute for all
chmod 755 - rwx for owner, rx for group and world
For more options, see man chmod.
```

- reboot - Reinicia o computador.
- reboot

cli commands

PROCESS MANAGEMENT

- ① ps - display your currently active processes
- ① top - display all running processes
- ① kill pid - kill process id pid
- ① killall proc - kill all processes named proc (use with extreme caution)
- ① bg - lists stopped or background jobs; resume a stopped job in the background
- ① fg - brings the most recent job to foreground
- ① fg n - brings job n to the foreground

SHORTCUTS

- ① Ctrl+C - halts the current command
- ① Ctrl+Z - stops the current command, resume with fg in the foreground or bg in the background
- ① Ctrl+D - log out of current session, similar to exit
- ① Ctrl+W - erases one word in the current line
- ① Ctrl+U - erases the whole line
- ① Ctrl+R - type to bring up a recent command
- ① !! - repeats the last command
- ① exit - log out of current session

FILE COMMANDS

- ① ls - directory listing
 - ① ls -al - formatted listing with hidden files
 - ① cd dir - change directory to dir
 - ① cd - change to home
 - ① pwd - show current directory
 - ① rm file - delete file
 - ① rm -rf dir - force remove directory dir *
 - ① cp file1 file2 - copy file1 to file2
 - ① cp -r dir1 dir2 - copy dir1 to dir2; create dir2 if it doesn't exist
 - ① mv file1 file2 - rename or move file1 to file2 if file2 is an existing directory, moves file1 into directory file2
 - ① ln -s file link - create symbolic link link to file
 - ① touch file - create or update file
 - ① cat > file - places standard input into file
 - ① more file - output the contents of file
 - ① head file - output the first 10 lines of file
 - ① tail file - output the last 10 lines of file
 - ① tail -f file - output the contents of file as it grows, starting with the last 10 lines
- SEARCHING
- ① grep pattern files - search for pattern in files
 - ① grep -r pattern dir - search recursively for pattern in dir
 - ① command | grep pattern - search for pattern in the output of command
 - ① locate file - find all instances of file

SYSTEM INFO

- ① date - show the current date and time
- ① cal - show this month's calendar
- ① uptime - show current uptime
- ① w - display who is online
- ① whoami - who you are logged in as
- ① finger user - display information about user
- ① uname -a - show kernel information
- ① cat /proc/cpuinfo - cpu information
- ① cat /proc/meminfo - memory information
- ① man command - show the manual for command
- ① df - show disk usage
- ① du - show directory space usage
- ① free - show memory and swap usage
- ① whereis app - show possible locations of app
- ① which app - show which app will be run by default

COMPRESSION

- ① tar cf file.tar files - create a tar named file.tar containing files
- ① tar xf file.tar - extract the files from file.tar
- ① tar czf file.tar.gz files - create a tar with Gzip compression
- ① tar xzf file.tar.gz - extract a tar using Gzip
- ① tar cjf file.tar.bz2 - create a tar with Bzip2 compression
- ① tar xjf file.tar.bz2 - extract a tar using Bzip2
- ① gzip file - compresses file and renames it to file.gz
- ① gzip -d file.gz - decompresses file.gz back to file

NETWORK

- ① ping host - ping host and output results
- ① whois domain - get whois information for domain
- ① dig domain - get DNS information for domain
- ① dig -x host - reverse lookup host
- ① wget file - download file
- ① wget -c file - continue a stopped download

INSTALLATION

- ① Install from source:
./configure
make
make install
- ① dpkg -i pkg.deb - install a package (Debian)
- ① rpm -Uvh pkg.rpm - install a package (RPM)

FILE PERMISSIONS

- ① chmod octal file - change the permissions of file to octal, which can be found separately for user, group, and world by adding:
 - 4 - read (r)
 - 2 - write (w)
 - 1 - execute (x)

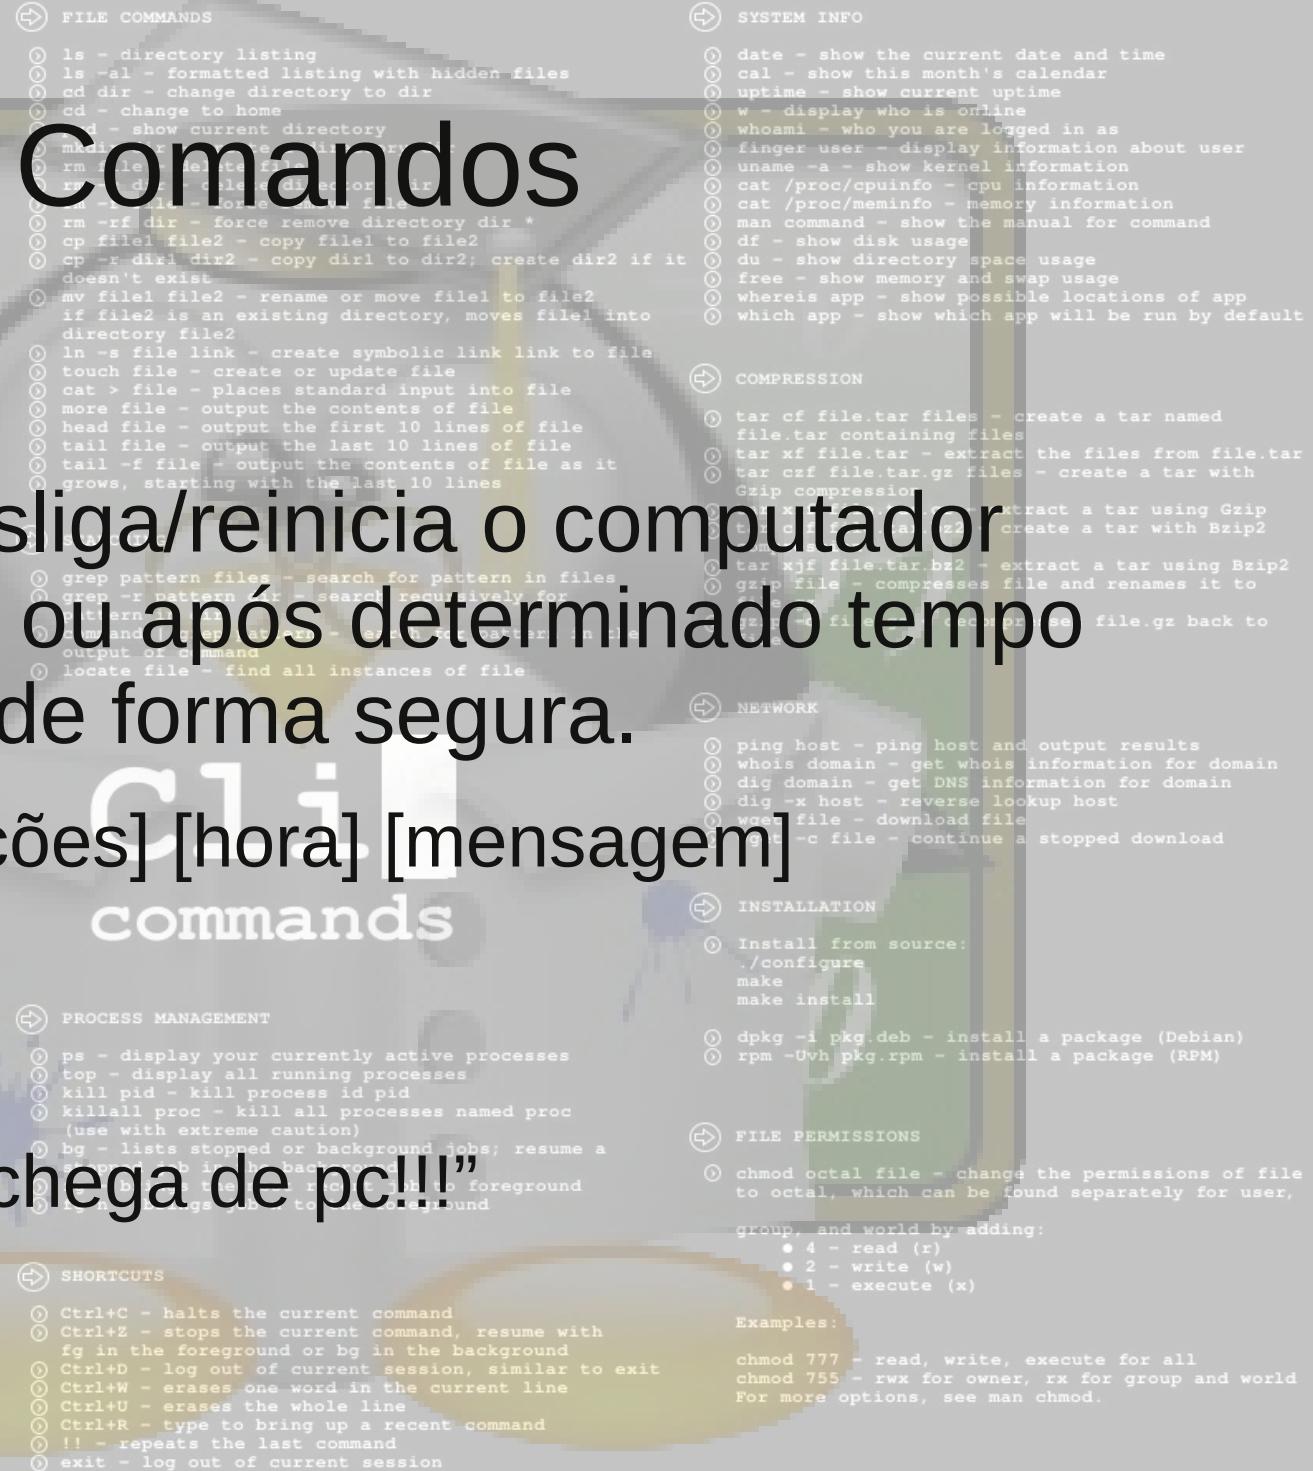

Examples:

```
chmod 777 - read, write, execute for all
chmod 755 - rwx for owner, rx for group and world
For more options, see man chmod.
```

- shutdown - Desliga/reinicia o computador imediatamente ou após determinado tempo (programável) de forma segura.

`shutdown [opções] [hora] [mensagem]`

- [opções] -hr
- [hora] HH:MM
- [mensagem] “chega de pc!!!”

FHS - Filesystem Hierarchy Standard

/bin/

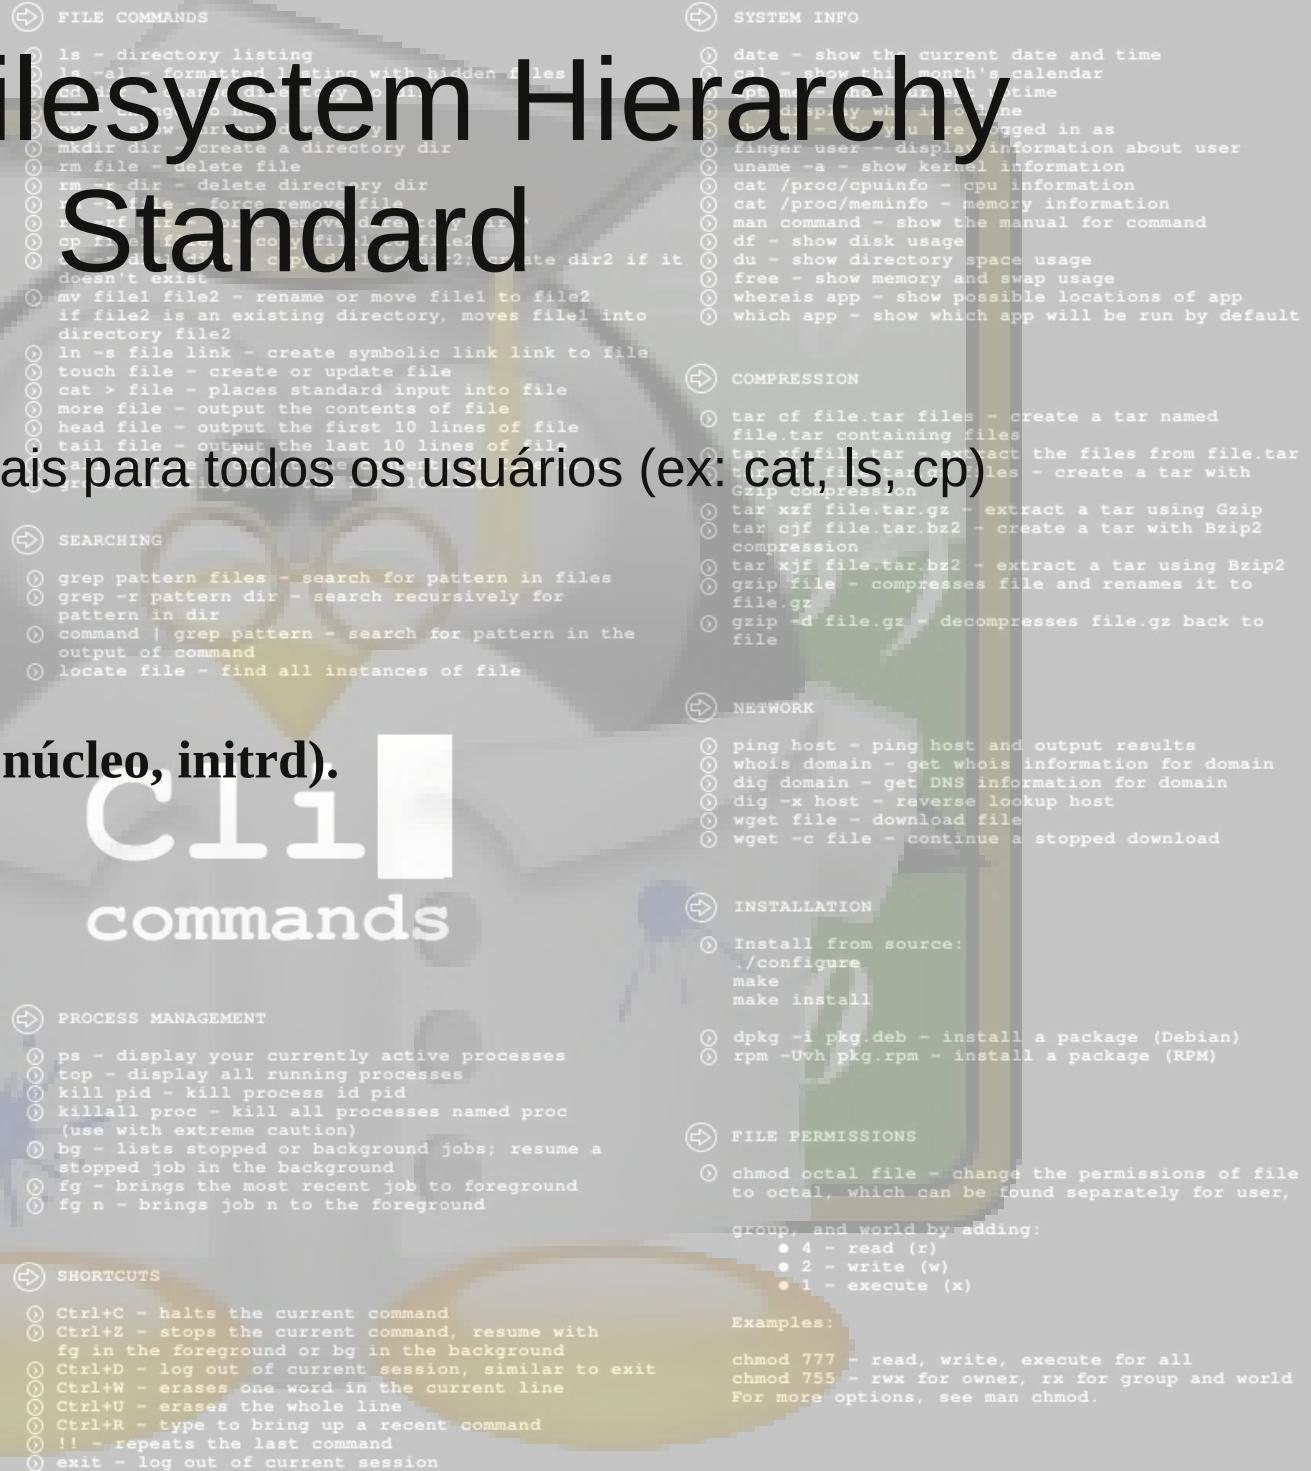

Comandos binários essenciais para todos os usuários (ex: cat, ls, cp)

/boot/

Arquivos do Boot loader (ex: núcleo, initrd).

/dev/

Dispositivos (ex: /dev/null).

FHS - Filesystem Hierarchy Standard

/etc/

Arquivos de configuração específicos do computador.

/etc/X11/

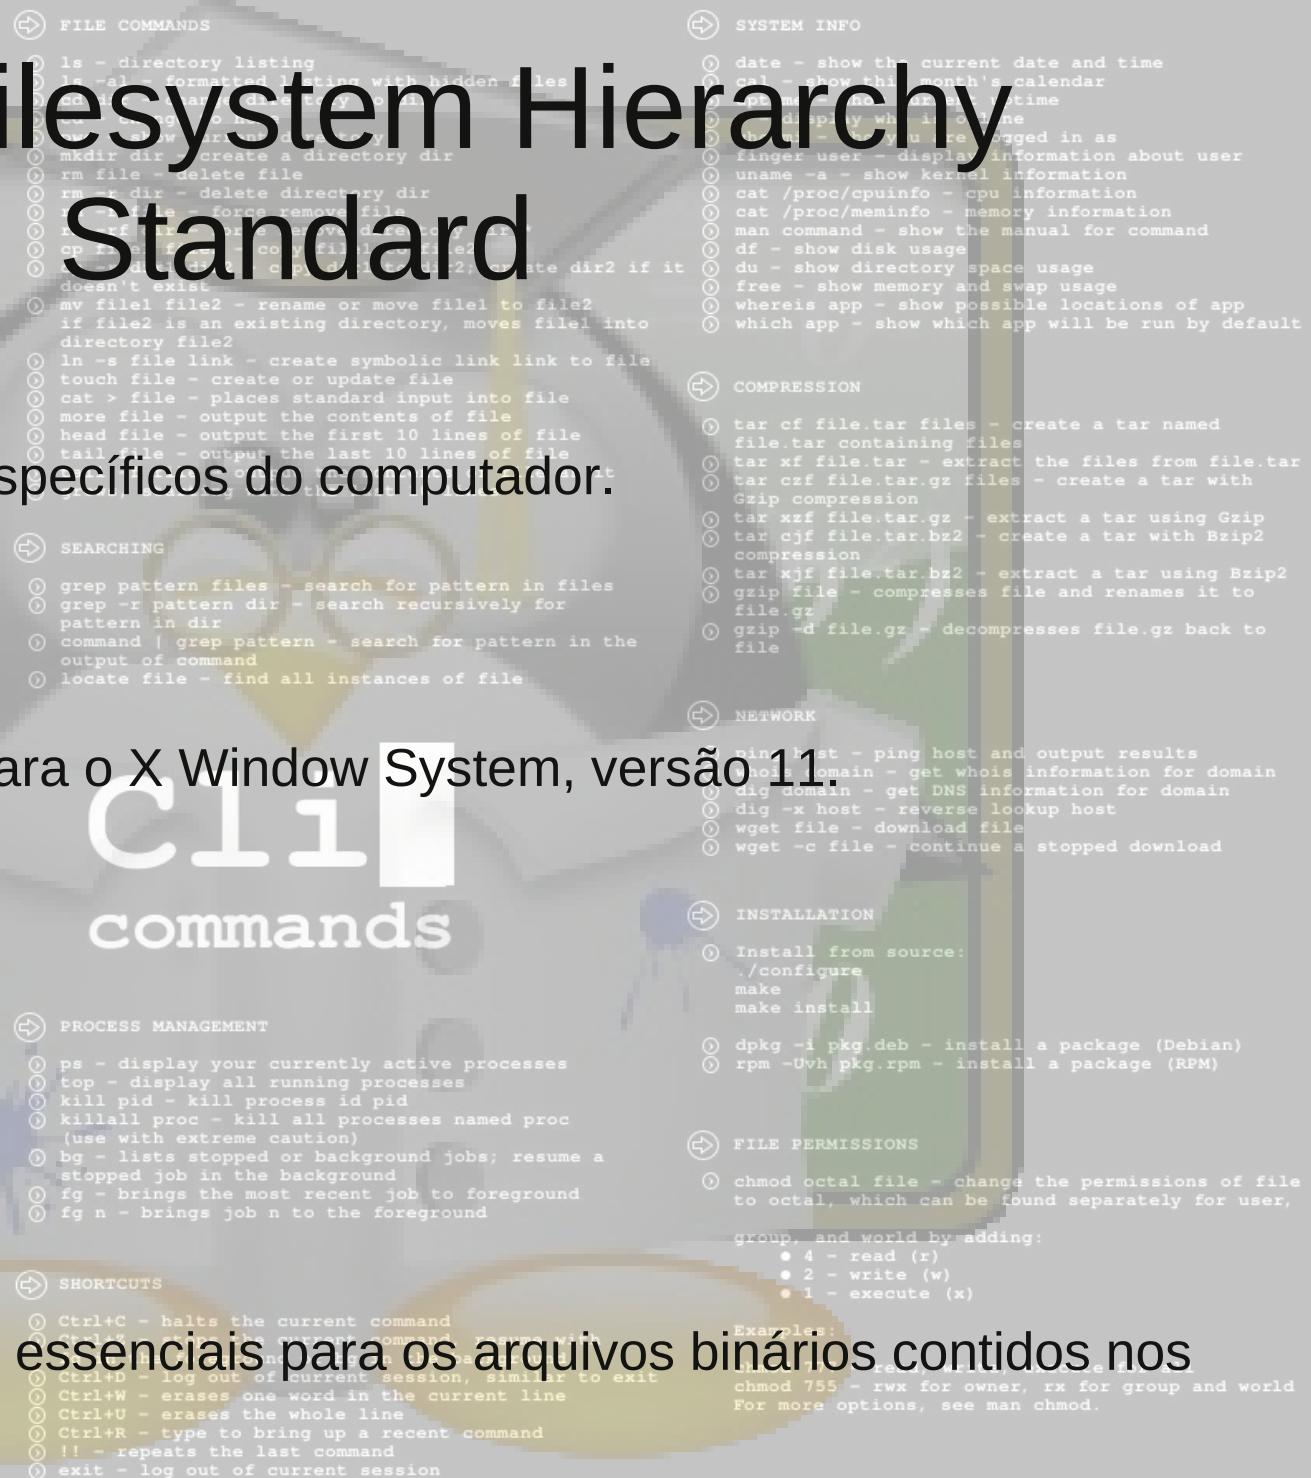

Arquivos de configuração para o X Window System, versão 11.

/home/

Diretórios de usuários.

/lib/

Diretório com as bibliotecas essenciais para os arquivos binários contidos nos diretórios /bin/ e /sbin/.

FHS - Filesystem Hierarchy Standard

/proc/

Sistemas de arquivo virtual, que possui o estado do núcleo e processos do sistema; a maioria dos arquivos é baseada no formato texto (ex: tempo de execução, rede).

/root/

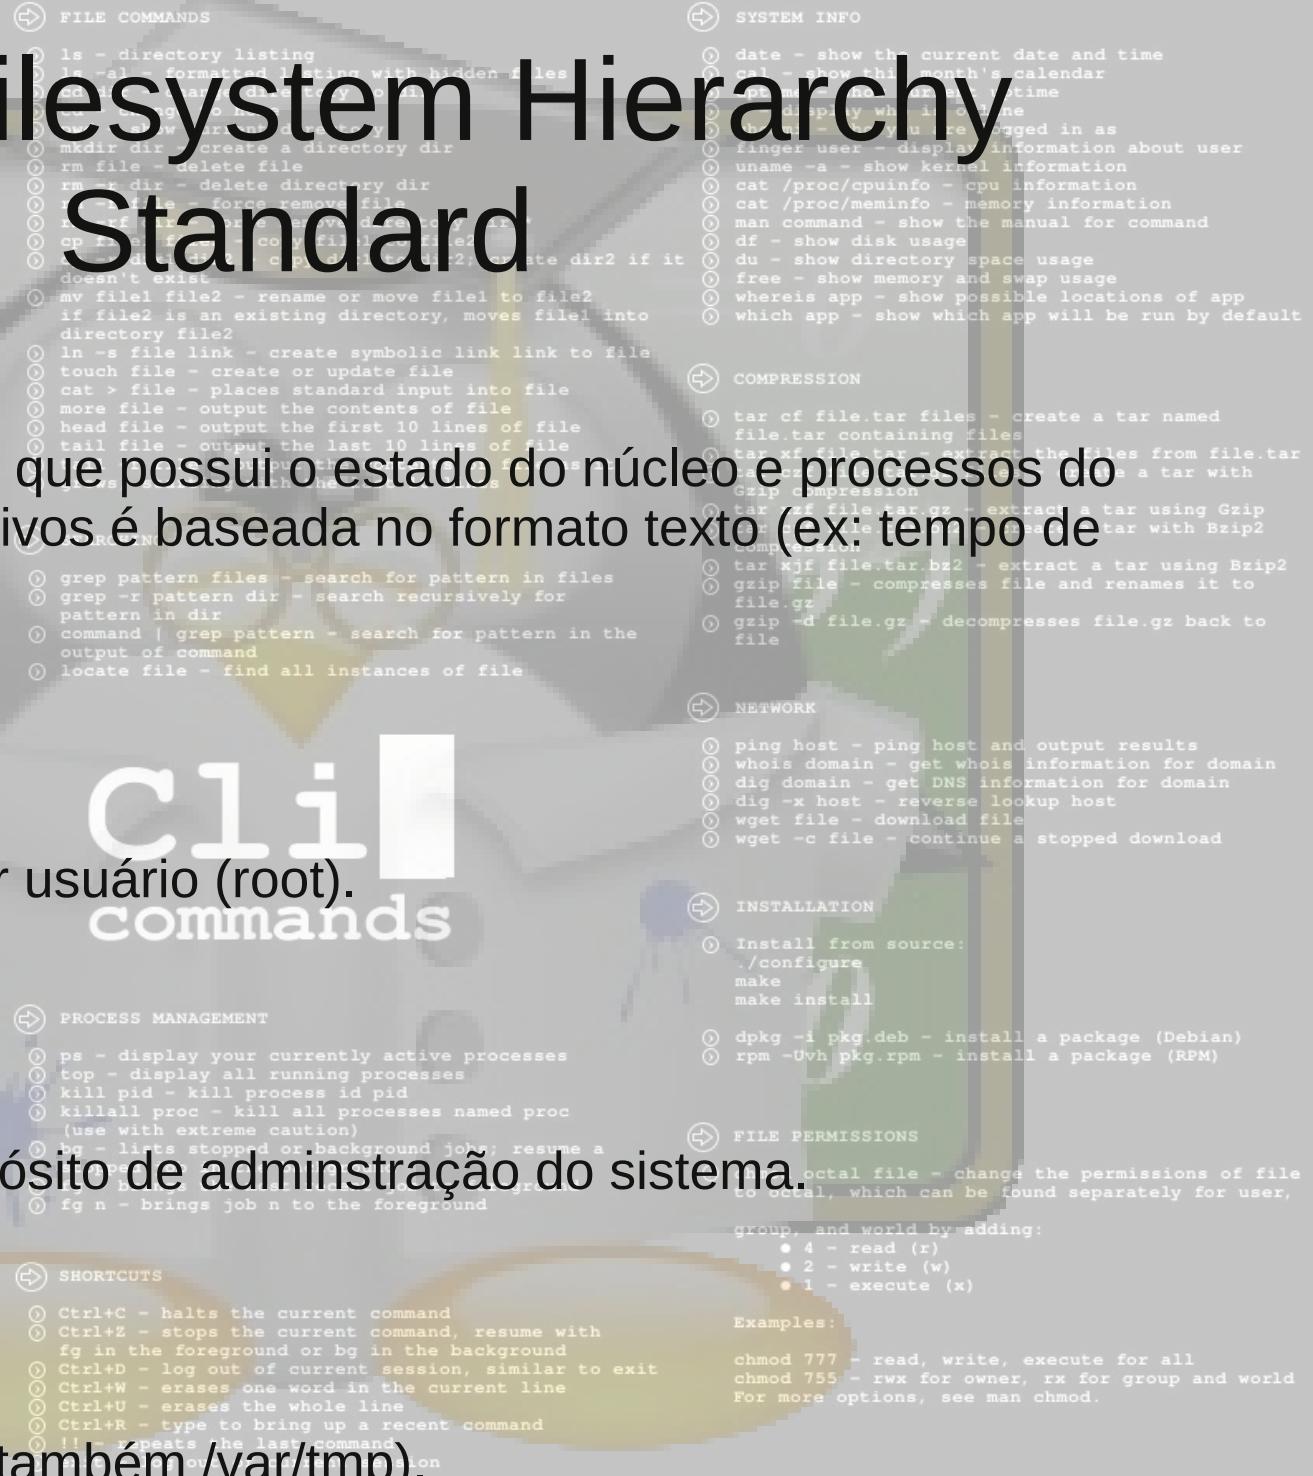

Diretório home para o super usuário (root).

/sbin/

Arquivos binários para propósito de administração do sistema.

/tmp/

Arquivos temporários. (Ver também /var/tmp).

FHS - Filesystem Hierarchy Standard

/usr/

Hierarquia secundária para dados compartilhados de usuários, cujo acesso é restrito apenas para leitura.

/usr/include/

Diretório padrão para arquivos do tipo header.

/usr/lib/

O mesmo que a hierarquia do topo (/lib).

/usr/share/

Dados compartilhados que são independentes da arquitetura do computador..

/usr/local/

Hierarquia terciária com dados locais, específicos deste host

```
FILE COMMANDS
ls - directory listing
ls -al - formatted listing with hidden files
ls -l - long listing
ls -R - list subdirectories
mkdir dir - create a directory dir
rm file - delete file
rmdir dir - delete directory dir
rm -f file - force remove file
cp file1 file2 - copy file1 to file2
cd /dir1/dir2 - change directory to dir2 if it doesn't exist
mv file1 file2 - rename or move file1 to file2 if file2 is an existing directory, moves file1 into directory file2
ln -s file link - create symbolic link link to file
touch file - create or update file
cat > file - places standard input into file
more file - output the contents of file
head file - output the first 10 lines of file
tail file - output the last 10 lines of file
tar cf file.tar files - create a tar named file.tar containing files
tar xf file.tar - extract the files from file.tar
tar zcf file.tar.gz - create a tar with Gzip compression
tar zxvf file.tar.gz - extract a tar using Gzip
tar cjf file.tar.bz2 - create a tar with Bzip2 compression
tar jxvf file.tar.bz2 - extract a tar using Bzip2
gzip file - compresses file and renames it to file.gz
gzip -d file.gz - decompresses file.gz back to file

SYSTEM INFO
date - show the current date and time
cal - show this month's calendar
uptime - display how long the system has been up
who - display who is online
finger user - display information about user
uname -a - show kernel information
cat /proc/cpuinfo - cpu information
cat /proc/meminfo - memory information
man command - show the manual for command
df - show disk usage
du - show directory space usage
free - show memory and swap usage
whereis app - show possible locations of app
which app - show which app will be run by default

COMPRESSION
tar cf file.tar files - create a tar named file.tar containing files
tar xf file.tar - extract the files from file.tar
tar zcf file.tar.gz - create a tar with Gzip compression
tar zxvf file.tar.gz - extract a tar using Gzip
tar cjf file.tar.bz2 - create a tar with Bzip2 compression
tar jxvf file.tar.bz2 - extract a tar using Bzip2
gzip file - compresses file and renames it to file.gz
gzip -d file.gz - decompresses file.gz back to file

NETWORK
ping host - ping host and output results
whois domain - get whois information for domain
dig domain - get DNS information for domain
dig -x host - reverse lookup host
wget file - download file
wget -c file - continue a stopped download

INSTALLATION
Install from source:
./configure
make
make install

dpkg -i pkg.deb - install a package (Debian)
rpm -Uvh pkg.rpm - install a package (RPM)

FILE PERMISSIONS
chmod octal file - change the permissions of file to octal, which can be found separately for user, group, and world by adding:
• 4 - read (r)
• 2 - write (w)
• 1 - execute (x)
chmod 777 - read, write, execute for all
chmod 755 - rwx for owner, rx for group and world
For more options, see man chmod

SHORTCUTS
Ctrl+Z - stops the current command, resume with fg in the foreground or bg in the background
Ctrl+D - log out of current session, similar to exit
Ctrl+W - erases one word in the current line
Ctrl+U - erases the whole line
Ctrl+R - type to bring up a recent command
!! - repeats the last command
exit - log out of current session
```

FHS - Filesystem Hierarchy Standard

/var/

Arquivos "variáveis", como logs, base de dados, páginas Web e arquivos de e-mail.

/var/lock/

Arquivos de lock. Utilizados para manter o controle sobre recursos em uso.

/var/log/

Arquivos para log. Utilizado para log de dados em geral.

/var/run/

Contém informação sobre a execução do sistema desde a sua última inicialização. (ex: usuários e daemons em execução).

/var/tmp/

Arquivos temporários. Quando em modo multi-usuário, preferível em relação ao /tmp.

```
FILE COMMANDS
ls - directory listing
ls -al - formatted listing with hidden files
ls -l - long listing
ls -R - list subdirectories
mkdir dir - create a directory dir
rm file - delete file
rmdir dir - delete directory dir
rm -f file - force remove file
cp file1 file2 - copy file1 to file2
cp -d dir1 dir2 - copy dir1 to dir2; create dir2 if it doesn't exist
mv file1 file2 - rename or move file1 to file2
if file2 is an existing directory, moves file1 into directory file2
ln -s file link - create symbolic link link to file
touch file - create or update file
cat > file - places standard input into file
more file - output the contents of file
head file - output the first 10 lines of file
tail file - output the last 10 lines of file
tail -n lines file - output the last n lines of file
tail -f file - output the last lines of file as they are added to the end of the file
SEARCHING
grep pattern files - search for pattern in files
grep -r pattern dir - search recursively for pattern in dir
command | grep pattern - search for pattern in the output of command
locate file - find all instances of file
SYSTEM INFO
date - show the current date and time
cal - show this month's calendar
uptime - display how long the system has been up
whoami - display who you are logged in as
finger user - display information about user
uname -a - show kernel information
cat /proc/cpuinfo - cpu information
cat /proc/meminfo - memory information
man command - show the manual for command
df - show disk usage
du - show directory space usage
free - show memory and swap usage
whereis app - show possible locations of app
which app - show which app will be run by default
COMPRESSION
tar cf file.tar files - create a tar named file.tar containing files
tar xvf file.tar - extract the files from file.tar
tar zvf file.tar.gz - extract a tar using Gzip compression
tar cjf file.tar.bz2 - create a tar with Bzip2 compression
tar xf file.tar.bz2 - extract a tar using Bzip2
gzip file - compresses file and renames it to file.gz
gzip -d file.gz - decompresses file.gz back to file
NETWORK
ping host - ping host and output results
whois domain - get whois information for domain
dig domain - get DNS information for domain
dig -x host - reverse lookup host
wget file - download file
wget -c file - continue a stopped download
INSTALLATION
Install from source:
./configure
make
make install
dpkg -i pkg.deb - install a package (Debian)
rpm -Uvh pkg.rpm - install a package (RPM)
FILE PERMISSIONS
chmod octal file - change the permissions of file to octal, which can be found separately for user, group, and world by adding:
• 4 - read (r)
• 2 - write (w)
• 1 - execute (x)
Examples:
    chmod 755 file - gives read, write, and execute permission to owner and group, and read and execute permission to world
    chmod 644 file - gives read and write permission to owner and group, and read permission to world
    chmod 400 file - gives read permission to owner and group, and no permission to world
For more options, see man chmod.
SHORTCUTS
Ctrl+C - halts the current command
Ctrl+Z - stops the current command, resume with fg in the foreground or bg in the background
Ctrl+D - lists stopped or background jobs; resumes a job with fg in the foreground or bg in the background
Ctrl+W - erases one word in the current line
Ctrl+U - erases the whole line
Ctrl+R - type to bring up a recent command
!! - repeats the last command
exit - log out of current session
```

FILE COMMANDS
ls - directory listing
ls -al - formatted listing ■ th hidden files
cd - change directory to
cd -c get to home
pwd - print current directory
mkdir dir - create a directory dir
rm file - delete file
rm -r dir - delete directory dir
rm -f file - force remove file
rm -rf dir - force remove directory dir *

SYSTEM INFO
date - show the current date and time
cal - show this month's calendar
uptime - show current uptime
w - display who is online
whoami - who you are logged in as
finger user - display information about user
uname -a - show kernel information
cat /proc/cpuinfo - cpu information
cat /proc/meminfo - memory information
man command - show the manual for command

Adicione o guia Foca Linux no campo de pesquisas do Firefox ou Internet Explorer 7, [clicando aqui](#).

Adicione a barra de pesquisa do guia Foca Linux no Firefox, [clicando aqui](#).

BICAMPEÃO!!! O Foca Linux vence novamente o premio favoritos de 2007 do tradicional site de noticias br-linux (<http://br-linux.org>) com quase o triplo do percentual de votos do ano passado (26% e 10% em 2006). Veja o resultado final em <http://br-linux.org/linux/favoritos-2007-34-resultados-nas-categorias-da-comunidade>.

Spirit Linux (<http://www.spiritlex.com.br>), empresa que apóia o guia Foca Linux é 5a colocada entre as empresas que apóiam a comunidade no premio favoritos de 2007 do site de noticias br-linux (<http://br-linux.org>).

18/11/2007 - Gleydson Mazioli é primeiro colocado em certificação Linux internacional. Leia mais [clicando aqui](#).

OBS.: Para receber um e-mail avisando sobre novas versões deste guia e lançamento de novos níveis de aprendizado, preencha o formulário localizado ao final desta página. Seu e-mail será usado somente para notificação de novas versões e de modo algum será passado a terceiros para prática de SPAM.

O Foca GNU/Linux é um guia que traz desde explicações básicas sobre computadores e o sistema GNU/Linux até a administração e segurança do sistema. Os assuntos do guia são explicados em linguagem clara e organizados de forma linear e didática, evitando termos técnicos nos níveis iniciais, até que o usuário se habitue com sua utilização de forma gradual. Isto faz o guia indispensável para o usuário GNU/Linux iniciante ou os mais curiosos. Todas as seções do guia Foca GNU/Linux tem exemplos para melhor compreensão do assunto explicado e links dinâmicos que te levam facilmente a assuntos relacionados (na versão HTML).

Para facilitar a leitura do guia, eu o dividi em três níveis de aprendizado: Iniciante, Intermediário e Avançado.
